

# Filament Syfter Product Sheet

## Data sources Integration

### Unlock the Potential of Your Data Ecosystem

Data is the cornerstone of informed decision-making in today's digital landscape. Syfter offers comprehensive solutions to integrate, manage, and utilise your data sources to their fullest potential. Providing seamless access to various data sources, empowers your organisation to achieve unparalleled insights and operational efficiency.

### Technical Specifications and Access Requirements

#### Data Sources Access:

-  • **API Keys/Credentials:** Securely connect to your data sources with API keys or credentials, ensuring data integrity and access control.
-  • **Flat File Integration:** Import data directly from CSV, Excel, or other flat file formats for easy integration of offline data sources.

#### Package Access:

-  • Customisable packages tailored to your business needs, providing flexibility and scalability for your data integration strategy.

#### Credit Limit/Plan:

-  • Various credit plans to suit the scale of your operations, ensuring you have the necessary resources to manage and analyse your data effectively.

#### Sources Priority:

-  • Prioritise data sources based on your operational requirements and strategic objectives, optimising the flow and utilisation of information.

#### Minimum Refreshing Schedule:

-  • Set the minimum refreshing schedule to keep your data up-to-date, from real-time updates to daily, weekly, or monthly refresh cycles, ensuring you always have access to the latest information.

## Integration and Management Features

- **Bi-Directional Sync:** Keep your data consistent across platforms with bi-directional synchronisation, ensuring accuracy and reliability.

- **Custom Mapping and Fields:** Tailor the integration to your specific needs with custom mapping of standard or custom fields.

- **Automatic and Manual Push/Pull Options:** Flexibility in how you manage data integration, with both automatic updates and manual push/pull options for targeted data management.

- **Comprehensive Data Rules:** Define matching rules, mandatory fields, and permissions for creating or updating records, ensuring data integrity and compliance.
